Navegação básica

1. Vamos criar as páginas principais do nosso APP, rode:

```
mkdir src/screens/notes mkdir src/screens/notes/index touch src/s
creens/notes/index/index.js mkdir src/screens/auth mkdir src/scre
ens/auth/register touch src/screens/auth/register/index.js mkdir
src/screens/auth/login touch src/screens/auth/login/index.js mkdi
r src/screens/users mkdir src/screens/users/edit touch src/screen
s/users/edit/index.js
```

2. Na screen Notes coloque:

```
import React, { Fragment } from 'react'; const Notes = () => (  <
Fragment>   Hello World  <Fragment> ); export default Notes;
```

3. Na screen Register coloque:

```
import React, { Fragment } from 'react'; const Register = () => (
 <Fragment>   Hello World  <Fragment> ); export default Register;
```

4. Na screen Login coloque:

```
import React, { Fragment } from 'react'; const Login = () => (  <
Fragment>   Hello World  <Fragment> ); export default Login;
```

5. Na screen User Edit coloque:

```
import React, { Fragment } from 'react'; const UserEdit = () => (
 <Fragment>   Hello World  <Fragment> ); export default UserEdit;
```

6. Atualize o routes.js

```
import React from 'react' import { BrowserRouter, Switch, Route }
from 'react-router-dom' import Home from './screens/home'; import
Register from './screens/auth/register' import Login from './scre
ens/auth/login' import NotesIndex from './screens/notes/index' im
port UserEdit from './screens/users/edit' const Routes = () => (
  <BrowserRouter>     <Switch>         <Route exact path='/' component
={Home} />       <Route exact path='/register' component={Register
} />        <Route exact path='/login' component={Login} />        <R
oute exact path='/notes' component={NotesIndex} />        <Route ex
act path='/users/edit' component={UserEdit} />     <Switch>  <Brow
serRouter> ) export default Routes;
```

7. Atualize o component Header colocando:

```
... import { Link } from 'react-router-dom'; function Header(){
const [openMenu, setOpenMenu] = useState(false)  return(     <Navb
ar>     ...          <Link to="/">               <img src={LogoImage
} />        <Link>     ...          <Navbar.Menu id="navbar-menu"
>         <Navbar.Segment as="div" className="navbar-item navbar
-end" align="right">        <Column.Group>             <Colu
mn>             <Link to="/register" className="button is-whit
e has-text-custom-purple">RegisterLink>            <Column>
      <Column>             <Link to="/login" className="but
ton is-outlined is-custom-purple">LoginLink>            <Column
>          <Column.Group>        <Navbar.Segment>        <Nav
bar.Menu>      <Container>     <Navbar> ) } export default Header;
```

8. Atualize a screen Home colocando:

```
... import { Link } from 'react-router-dom'; const Home = () => (
  <Fragment>     ...       <Link to="/register" className="button is-
outlined is-white is-large">         <strong>Register for free Now
strong>       <Link>    ...  <Fragment> ) export default Home;
```
